

Deferred Lease Facility

Given the current device and component supply constraints, along with the threat of increase device costs over the coming months we wanted to outline an option that may help both from a budgeting and IT planning perspective.

We at edde can offer a deferred lease facility that allows the school to secure pricing and devices now while stock is available for your summer roll out, with lease payments commencing up to 6 months later.

From a finance perspective, this means:

- ✓ No lease payments until the deferred start date
- ✓ Alignment with the parent contributions commencing
- ✓ Certainty of pricing and supply without immediate cash impact

From an IT perspective, this provides:

- ✓ Guaranteed access to devices despite supply constraints
- ✓ Confidence for deployment in time for the start of the Academic year
- ✓ Reduced risk of delays impacting teaching and learning

This approach is designed to give the school certainty on availability now, while maintaining flexibility on when costs begin.

We'd be happy to walk through the structure and how this might look and the timings to ensure it aligns with both financial planning and device demand.
